SEED LABORATORY

We have a well equipped seed laboratory of our own with a graduate seed analyst in charge. As rapidly as possible we test all grass and clover seed for purity and germination, and the vegetable seed for germination.

It is very important to get the best possible stand of the seeds that you plant.

Dust small seeds with Semesan, grain with Improved Ceresan, corn with Semesan Jr., dip potatoes with Semesan Bel dissolved in water.

These dusts will aid considerably in insuring seed against decay, reduce damping-off, and certain seed borne diseases.
